Kinetic has developed a new Welding Robotic System for Steel Structure and with this system you can save up to 50 welders in your factory. From automatic assembly up to welding and seam track there is everything available.

We can connect from the Beam Welding Line up to the Preservation line and automate your factory to a minimum of employees. For the programming we are offering to you a external programming system, as well as we are able to train the employees in Dubai. If you require a program due to any difficulties in your factory we will program the items for you.

Welding Robotic System for Structural Steel, automatic endplate assembly, automatic attachment assembly
